

SAP Enterprise Testing in a Nutshell

Why is SAP Comprehensive Testing Important:

Digital transformation is a must for companies that want to be nimble and resilient. Gartner predicts more change in the next 5 years than the last 50 years. Change is accelerating and systems must keep up. Testing is usually the #1 barrier to speed, agility, and time-to-market.

SAP Testing by Tricentis is a unique platform that simplifies testing automation, reducing the risks and the costs of change for companies who want to modernize their systems landscape and accelerate digital transformation. As everything becomes interconnected, testing must become smarter and faster.

What is SAP Testing by Tricentis:

SAP has partnered with Tricentis, the clear leader in enterprise systems testing to remove the bottlenecks associated with testing. The software suite offers three state-of-the-art components that work together to improve a company's ability to change quickly.

Key components include:

1. Change Impact Analysis determines **What to Test**:
Provides artificial intelligence (AI) powered impact analysis for SAP updates, exposing the risks to your critical business processes lurking in any change, while highlighting most-at-risk areas.
2. Enterprise Continuous Testing focuses on **Does it Work**:
Automates end-to-end testing across SAP and non-SAP systems in a model-based “no coding required” platform.
3. Load Testing verifies **Does it Scale**:
Enables cloud-based performance testing on demand with instant provisioning to run tests at scale in minutes, pinpointing any bottlenecks.

SAP Testing by Tricentis Benefits:

- 10X faster testing, leveraging AI-powered recommendations that highlight what to test.
- 90% reduction in risk.
- 50% reduction in costs associated with SAP systems testing.*
- Dramatic reduction in the need to use high-end I.T. human resources in the testing effort.
- Eliminates the fear of the unknown that often slows decision making and progress.
